

Para ser possível realizar a instalação do SQL 2008, é necessário instalar o ps2DLC via powershell em modo administrador que ativa o PowerShell 2.0 nas versões do W11 despois de agosto.

Como mitigação temporária de último recurso, você pode reinstalar o PowerShell 2.0 usando as seguintes etapas:

- a. Baixe o arquivo ps2DLC.zip .
- b. Extraia o arquivo ps2DLC.zip para uma pasta de sua escolha.
cd C:\Users\ nome_usuário\Downloads\ps2DLC
- c. Inicie uma janela do PowerShell no modo de administração.
- d. Altere para a pasta que contém os arquivos extraídos do PowerShell 2.0.
- e. Execute o seguinte comando:

```
.\loadGAC.ps1
```

```
PS C:\WINDOWS\system32> cd C:\Users\Bruno\Downloads\ps2DLC
PS C:\Users\Bruno\Downloads\ps2DLC> .\loadGAC.ps1
Running with Administrator privileges.
Script is running from: C:\Users\Bruno\Downloads\ps2DLC
System locale is set to: pt-BR
System architecture is set to: AMD64
This is an AMD64 or x86 system.

A operação foi concluída com êxito.
A operação foi concluída com êxito.
Registry import succeeded.
```

Se der erro "O arquivo loadGAC.ps1 não pode ser carregado porque a execução de scripts foi desabilitada neste sistema."

É necessário executar o seguinte comando no **powershell: Set-ExecutionPolicy Unrestricted** - apertar A(sim para todos).

Depois executar o .\loadGAC.ps1

Após a instalação, o executável roda normalmente.
